

PCA plot showing PC3 (8.8%) on the x-axis and PC1 (22.2%) on the y-axis. The plot displays numerous data points, each labeled with a gene name and its coordinates (e.g., 1::NC_073256.2:48-11163). The points are colored according to their cluster, with labels indicating the cluster number and the gene name. The plot shows a clear separation of clusters along the PC1 axis, with some clusters showing internal structure along the PC3 axis. Specific points are highlighted with arrows and labels: ACT, CAC, CAG, and CGG.
